Open tools shaped my stroke research

Open imaging tools. Reusable lesion datasets.

Sharing enables independent checks.

References 1–13

Reproducibility and replication

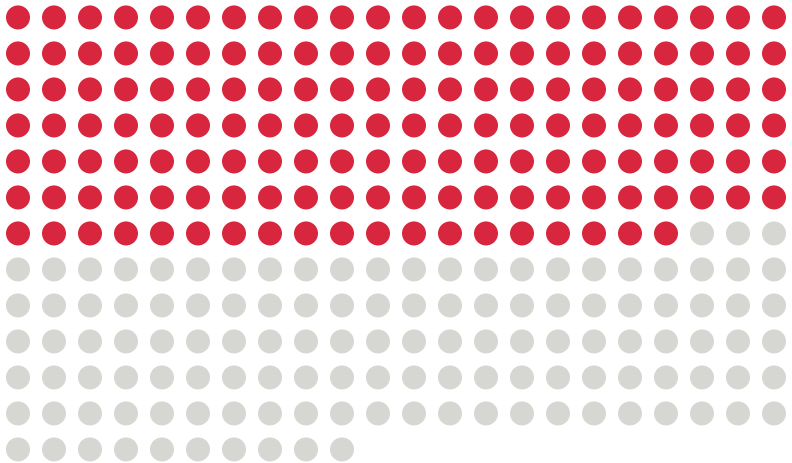

Reproducibility
Same data, same analysis.

Replication
New data, same question.

Reference 14

SCORE: 55% of claims replicated

Social and behavioural science

Replicated Not replicated

References 15, 16 · One mark per tested claim

Stroke research needs inspectable evidence

Protocols explain what was planned.

Data and code enable independent checks.

Different patients can produce different results.

References 14, 17

Four transparency checks

Can we read the paper?

Can we inspect and reuse materials?

Was the study registered?

Stroke publications since 2015

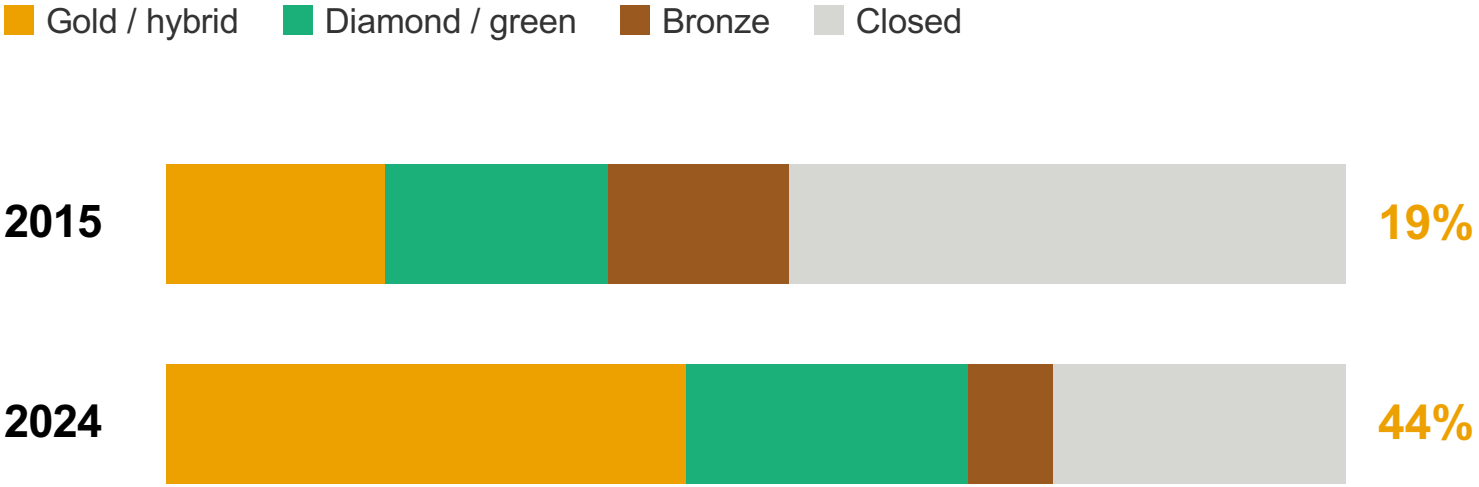

References 17–22

Stroke papers became easier to read

Reference 22 · Stroke articles · 2015–2024

Gold and hybrid drove access growth

Reference 22 · All stroke articles · Publication routes

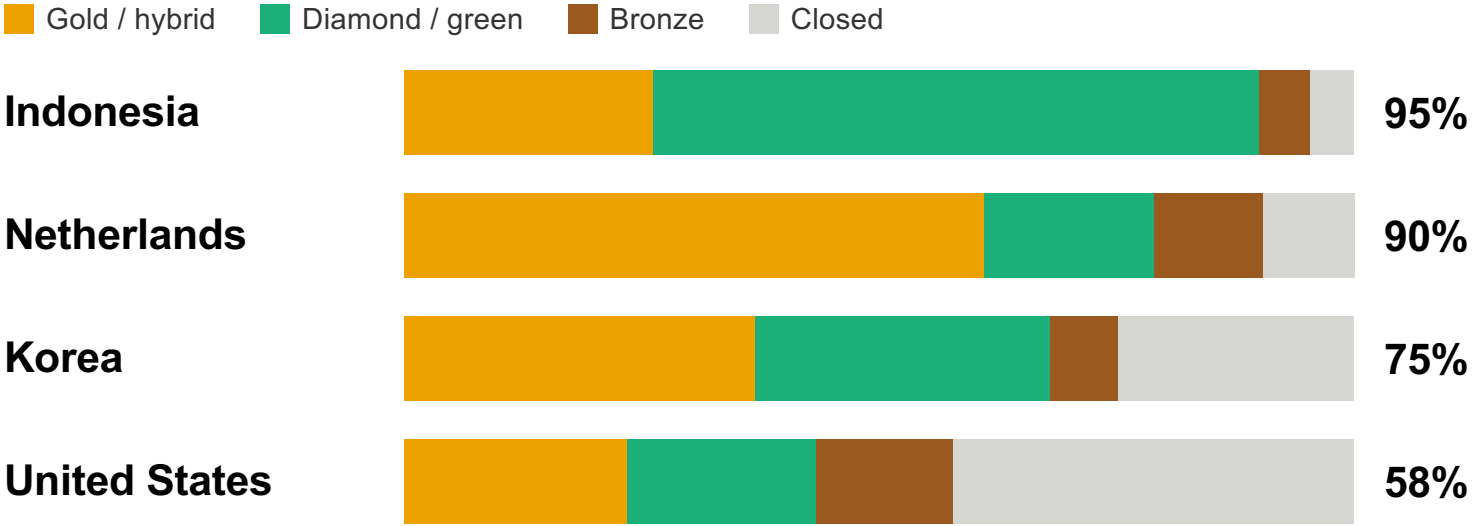

Funding is associated with open access

Stroke · High-income first authors

Reference 22 · OpenAlex funding metadata · 2015–2025

Access differs across stroke research communities

Reference 22 · Selected first-author countries · 2015–2025

Access grew; sharing links remained scarce

From abstracts and metadata

Statements outnumber deposits and public sources

References 19, 22, 23 · OA stroke full texts · 2025

Stroke data access differs by income

Deposited or public source

Reference 22 · OA stroke audit · 2015–2025

Sharing practices can be measured

Deposit · Code · Registration

Relative to the stroke average

Reference 22 · Descriptive index · Sample sizes differ

A rule does not ensure access

Obtainable data from surgical trials

Reference 24 · Bergeat et al. · JAMA Network Open

A proposal for the WSO

Create a WSO task force.

Reward verified sharing.

Track progress through this benchmark.

Measure, share, and improve stroke research

Benchmark

Code and data
